Control units

Installation and operating instructions
Series: Megacontrol
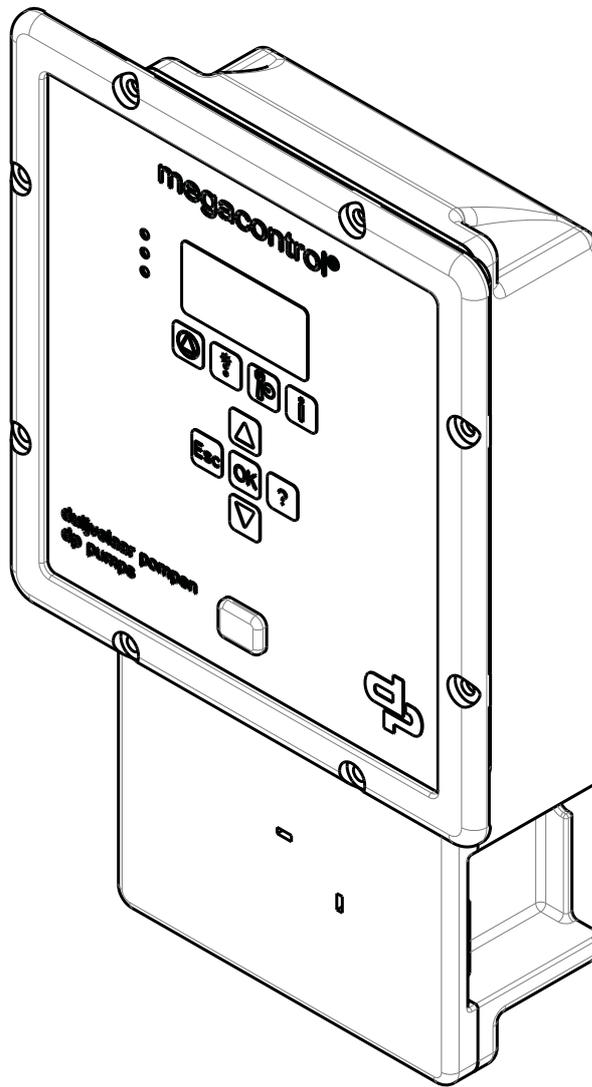

Table of Contents

12 Annexes

1   Introduction

1.1   Preface

This manual contains important information for reliable, proper and efficient operation. Compliance with the operating instructions is of vital importance to ensure reliability and a long service life of the product and to avoid any risks.
The first chapters contain information about this manual and safety in general. The following chapters provide information about normal use, installation, maintenance and repairs of the product. The annex contains the declaration(s) of conformity.

- Make yourself familiar with the content.
- Accurately follow the directions and instructions.
- Never change the sequence of the operations to be carried out.
- Keep this manual or a copy of it together with the logbook in a fixed place near the product which can be accessed by all personnel.

1.2   Icons and symbols

In this manual and in all accompanying documentation the following icons and symbols are used.

WARNING
Danger of electric Voltage. Safety sign according to IEC 417 - 5036

WARNING
Operations or procedures, if carried out without caution, may cause personal injury or damage to the product. General hazard sign according to ISO 7000-0434

ATTENTION
Is used to introduce safety instructions whose non-observance may lead to damage to the product and its functions.

ENVIRONMENTAL INSTRUCTION
Remarks with respect to the environment.

READ THE (SUPPLEMENTARY) DOCUMENTATION
Read the installation and operating instructions.

2   Identification, service and technical support

2.1   Identification, service and technical support

The system is identified based on the text "Megacontrol " as given on the front of the system.

Table 1: Control unit

Indication	Meaning
Megacontrol	Type of Control unit

The following address data are available for service and technical support:

Table 2: Address service department

DP-Pumps Kalkovenweg 13 2401 LJ Alphen a/d Rijn The Netherlands	Tel: +31 172 488388 Internet: www.dp-pumps.com E-mail: dp@dp-pumps.com

2.2   Supplementary documentation

This version is valid from Megacontrol version V1.9.0 Apart from this manual, the additional documentation given below is available as well:

Table 3: Supplementary documentation

Document	Code
General terms of delivery	119 / 1998
Manual WSD-Sensor	BE00000250
Modbus	BE00000584
Profibus	BE00000585

Also see: www.dp-pumps.com

Table 4: Megacontrol versions

Firm ware version (see parameter: 4-1-3)	Manual version
Megacontrol V 1.52	01-2013
Megacontrol V 1.57	01-2014
Megacontrol V 1.6.2	06-2015
Megacontrol V 1.7.1	05-2016
Megacontrol V 1.9.0	08-2018

Also see: www.dp-pumps.com

3   Warranty

3.1   Terms of warranty

The warranty period is settled by the terms of your contract or at least by the general terms and conditions of sales.

ATTENTION
Modifications or alterations of the product supplied are only permitted after consultation with the manufacturer. Original spare parts and accessories authorized by the manufacturer ensure safety. The use of other parts can invalidate any liability of the manufacturer for consequential damage.

ATTENTION
The warranty relating to the operating reliability and safety of the product supplied is only valid if the product is used in accordance with its designated use as described in the following sections of this manual. The limits stated in the data sheet must not be exceeded under any circumstances.

The warranty becomes invalid if one or more of the points below occur.
- The buyer makes modifications himself.
- The buyer carries out repairs himself or has these carried out by a third party.
- The product has been handled or maintained improperly.
- The product has non original DP-Pumps spare parts fitted.

DP-Pumps repairs defects under warranty when:

- They are caused by flaws in the design, the material or the production.
- They are reported within the warranty period.

Other terms of warranty have been included in the general terms of delivery, which are available upon request.

4   Safety and environment

4.1   General

This DP-Pumps product has been developed using state-of-the-art technology and is manufactured with utmost care and is subject to continuous quality control.

DP-Pumps does not accept any liability for damage or injury caused by not following the directions and instructions in this manual or by carelessness during the installation, use or maintenance of the product. Non-compliance with the safety instructions can jeopardize the safety of personnel, the environment and the product itself. Non-compliance with these safety instructions will also lead to forfeiture of any and all rights to claims for damages.

Non-compliance can result in:

- failure of important pump/system functions,
- failure of prescribed maintenance or service,
- injury caused by electrical, mechanical and chemical effects,
- leakage to the environment of hazardous substances,
- explosions.

Depending on the application, extra safety measures may be required. Contact DP-Pumps if a potential danger arises during use.

ATTENTION
The owner of the product is responsible for compliance with the local safety regulations and internal company guidelines.

ATTENTION
Not only must the general safety instructions laid down in this chapter on "Safety" be complied with, but also the safety instructions outlined under specific headings.

4.2   Environmental aspects

4.2.1   General
This product of DP-Pumps is designed to function in an environmentally friendly way during their entire life.

ENVIRONMENTAL INSTRUCTION
Always act according to the laws, by-laws regulations and instructions with respect to health, safety and the environment.

4.2.2   Dismantling
Dismantle the product and dispose of it in an environmentally friendly way. The owner is responsible for this.

ENVIRONMENTAL INSTRUCTION
Ask at the local government about the re-use or the environmentally friendly processing of discarded materials.

ENVIRONMENTAL INSTRUCTION
All components of the Megacontrol are manufactured in accordance with RoHS II directive 2011/65/EU.

5   Introduction

5.1   General
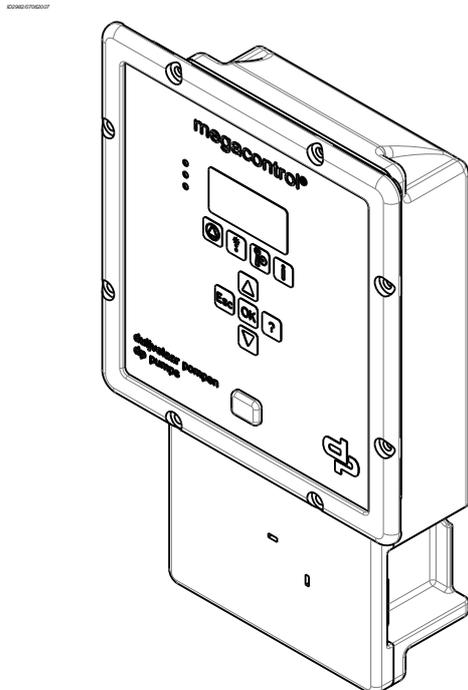

Figure 1: Control units of the type Megacontrol

Control units of the type Megacontrol are manufactured by DP-Pumps.

5.2   Intended use

The control unit is suitable for controlling a Hydro-Unit consisting of 1, 2, 3, 4, 5 or 6 pumps within the indicated working range (see "Working range").

Any other or further use of the control unit is not in conformity with its intended use. DP-Pumps does not accept any liability for any damage or injury resulting from this. The control unit has been produced in accordance with the current standards and guidelines. Use the control unit exclusively in a perfect technical state, in conformity with the intended use described below.

The *Intended use* as laid down in ISO 12100:2010 is the use for which the technical product is intended according to the specifications of the manufacturer. The use of the product has been described in the available documentation / information. Always observe the instructions given in the installation and operating instructions. When in doubt the product must be used as becomes evident from its construction, version and function.

5.3   Working range

The working range of the control unit can be summarized as follows:

Table 5: Working range of the Megacontrol

Type	Megacontrol
Maximum ambient temperature in control panel [°C]	50
Relative atmospheric humidity [%]	20 - 90 (no condensation)
Voltage [V]	1 x 230 V AC ± 10 %
Frequency [Hz]	50/60

Table 6: Specific applications of the Megacontrol

Type	Application area
Megacontrol	Building possible in the installations listed below:
	• Hydro-Unit with 1 - 6 pumps
	• Break-Unit with 1 - 6 pumps
	• Fire-Unit with 1 - 6 pumps

5.3.1   WSD-Sensor (option)

The working range of the WSD-Sensor can be summarized as follows:

Table 7: Working range of the WSD-Sensor

Type	WSD-Sensor
Maximum ambient temperature [°C]	30
Relative atmospheric humidity [%]	-
Voltage [V]	-
Frequency [Hz]	-
Medium temperature [°C]	5 - 30
Switching flow [l/min]	± 14

20070476-A

Table 8: Specific applications WSD

Type	Applications
WSD	Installations with a maximum of 3 membrane switch vessels.

5.4 Functioning

5.4.1 Standard operation

The Megacontrol is an intelligent control unit for different components of pressurization systems consisting out of a maximum of 6 pumps. The required system pressure is sensed by a pressure sensor on the outlet side of the installation.

When as a result of a decreasing water volume the pressure drops below the pressure set point, a pump will be switched on.

When the required system pressure has been reached, the pumps are switched off one at a time. The minimum run time is optimized constantly, which results in a considerable energy saving.

5.4.2 Custom made settings

The Megacontrol can be programmed through the human machine interface (HMI) operating panel and has been protected against unauthorized use by a password.

Also, the service port provides access to the parameters of the program which can be used to optimize the functionality of the installation, (see: "Parameter list").

⚠ **WARNING**
For access to the parameters of the program using the service port, always use the special service port cable!

The special service port cable (Art. nr. 6147117698) can by ordered separately.

5.4.3 Number of operating hours per pump

The current number of operating hours of a pump determines which pump will be switched on or off next. The pump with the fewest operating hours will be switched on first and the pump with the most

operating hours will be switched off first. This makes sure that all pumps have an equal number of operating hours, including the backup pump.

5.4.4 Test run

In order to prevent pumps from standing still for a longer period of time, an automatic test run procedure is provided as a standard.

5.4.5 Functioning WSD-Sensor (option)

In combination with the Megacontrol, the WSD can generate a failure message when, during a (adjustable) period of time, insufficient refreshment of the membrane switch vessel occurs.

The failure message is generated when:
- Insufficient refreshment occurs;
- The membrane of the membrane switch vessel is defective;
- There is no air left in the membrane switch vessel;
- The installation is not set / installed correctly.

5.4.6 Temperature-sensor (option)

When the Megacontrol is fitted with a temperature sensor, it can generate a temperature-dependent failure message.

6   Transport

6.1   Transport and storage

1.   Transport the control unit in the position as
      indicated on the pallet or packaging.
2.   Check if the control unit is stable.
3.   Observe the instructions on the packaging (if
      present).

 ATTENTION
Store the control unit in a dry and dust-
free place.

7   Installation

7.1   Mechanical installation

☞ **ATTENTION**
Contact the supplier if parts are missing or damaged.

Build in the control unit using suitable fastening material. Consult the annex "Built-in diagram" for the correct overall dimensions.

7.2   Electrical installation

⚠ **WARNING**
Only authorized personnel is allowed to connect the control unit electrically in accordance with the local regulations.

Electrical connections
- Make sure that the electric control unit specifications correspond with the power supply to which is connected.
- Consult the annex "Electrical diagram" for a list of all electrical power points.

7.2.1   Recommended RS485-termination for Megacontrol

The new board for Megacontrol is based on a new hardware platform. One new feature is, that the clamps for the external RS485-bus (J301) will now benefit the advantage of galvanic isolated bus- and GND-lines.

A   RS485-termination with 1…6 "DANFOSS Micro-Drives"

1   Megacontrol : keep the termination clamps on the Megacontrol T+ / T- open
2   Microdrives: switch the bus termination to position on, on each Micro Drive.

B1   RS485-termination with 1…2 "DANFOSS AQUA Drives"

1   Megacontrol : keep the termination clampson the Megacontrol T+ / T- open
2   AQUA Drive: switch the bus termination to position on, on each AQUA Drive

B2   RS485-termination with 3…6 "DANFOSS AQUA Drives"

1   Megacontrol : keep the termination clamps on the Megacontrol T+ / T- open
2   AQUA Drive: set the bus termination only on the last AQUA Drive
3   External termination: Place, near to the Megacontrol, an external active bus termination, like normally used for Profibus, for example: 6ES7 972-0DA00-0AA0 or FBCon DP M12 Term 24V

7.2.2   Parameter settings of the frequency converters

At the configuration VFD fixed all (parameter 3-3-3) you can set the selected VFD (parameter 3-4-3-1). Before you can set the VFD you have to disable the pump by pump in 'Operating mode: off' (parameter 1-2-1).
By setting the VFD's using the Megacontrol use the following sequence:

Table 9: Megacontrol parameter

No	Parameter	Description
1	3-4-3-20	Motor speed unit Hz
2	3-4-3-13	P nominal of VFD
3	3-4-3-14	U nominal of VFD
4	3-4-3-15	F nominal of VFD
5	3-4-3-16	I nominal of VFD
6	3-4-3-17	RPM nominal of VFD
7	3-4-3-9	VFD Ramp-Up
8	3-4-3-10	VFD Ramp-Down
9	3-4-3-11	VFD min. frequency
10	3-4-3-12	VFD max. frequency

After entering these parameters, the other parameters can be set at their discretion. Always check the correct setting of the frequency converters parameters.

7.2.3   Using contactors

ATTENTION
**Always place, using contactors and/or
auxiliary relays, a suitable RC filter or
varistor across the coil, e.g. Siemens
3RT29-16-1CD00**

7.3   Commissioning

The control unit is fully programmed and preset with
factory default settings. Use the control panel, or the
service port to access the parameters of the program
which can be used to optimize the functionality of the
installation, (see: "Parameter list").

8   Operation

8.1   Control panel (HMI)

The control panel comprises a back-lit display,
function, navigation, and operating keys, LED's, and
2 access points for the service interface. The display
shows important information for pump system
operation. Data can be displayed in plain text and
parameters can be set.
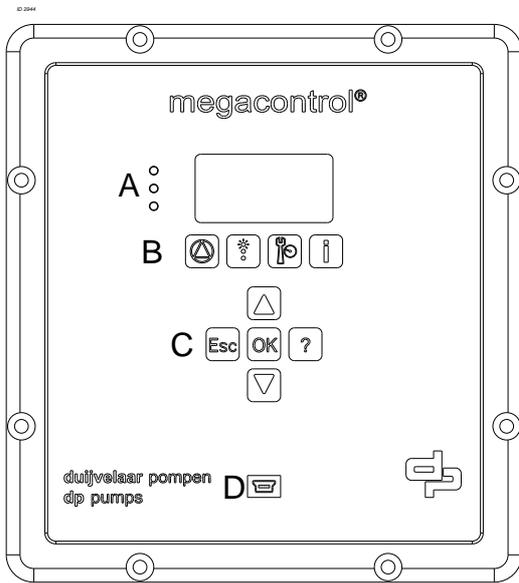

Figure 2: Front Megacontrol

Table 10: Traffic lights

A: LED's
The "traffic light" signals provide information about the pump system's operating status. LED's: • Red: Alert / urgent alarm is active. • Amber: Warning / non-urgent alarm is active. • Green: O.K. / trouble-free operation.

Table 11: Function keys

B: Function keys	
You can use the function keys to access the elements at the first menu level directly: Operation, Diagnosis, Settings and Information.	
	Operation
	Diagnosis
	Settings
	Information

Table 12: Navigation keys

C: Navigation keys	
The navigation keys are used for navigating in the menu and for confirming settings.	
	Up or Down • Move up / down through the root menu (displays the measured values of the system input); • Move up / down through the menu options or; • Increase / decrease a value when you are entering numerals.
	Escape key • Delete / reset entry (the entry is not saved); • Return to the previous menu level.
	OK key • Access to the quick menu; • Confirm a setting; • Confirm a menu selection. • Go to the next number when you are entering numerals.
	Help key • Displays a help text for each selected menu option.

D: Service interface RS232
The service interface allows a PC / Notebook to be connected with use of the special service port cable. The Megacontrol PC software can be used to configure and parameterize the pump system if you do not have access to a control panel. The Megacontrol software can also be updated via this interface. A second service interface is located on the back side of the controller.

8.1.1 Display

The 7-row display contains the following information:

ID 2987

Table 13: Display rows

	Display	Meaning
1	**1-1**-1	Displays the selected parameter no.
2	**Parameter / Function**	Parameter name, Function key: • Operation • Diagnosis • Settings • Info
3	**Parameter name**	List of selectable parameters
4	**Level**	Operating level: • All • User • Service • Factory
		"Scroll bar" within the list of selectable parameters
5	**MM-YY 00:00**	Current date and time

The number of the current menu or parameter is displayed in the top left of the screen. This number indicates the path through the menu levels and, therefore, allows you to quickly locate parameters (see "Parameter list").

The date and time is displayed in the bottom right of the screen. If a fault occurs, this is displayed in the bottom line and alternating with the date and time.

8.1.2 Continuous display

When in operation the most common values, like the system pressure are shown on the display continuously. By pushing the navigation buttons Up and Down all selected values are passing by. In Parameter setting **3-10 "Root menu"** these values can be selected as preset value. The selected values are marked with a " √ "
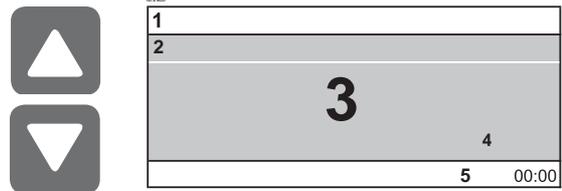

Table 14: Display example

	Display
1	**1**-1-1
2	System pressure
3	525
4	kPa
5	**MM-JJ 00:00**

8.1.2.1 Quick menu

Having access to the most used parameters a Quick menu can be entered by pressing the OK key.

8.1.3 Access levels

To prevent accidental or unauthorized access to the Megacontrol parameters, various access levels have been defined.

Table 15: Access levels

Access levels:	Explanation:
Standard	Unless users log on to one of the access levels, they will only have limited access to parameters.
User	Access level for expert users. It enables access to all the parameters required for commissioning. You have to enter a password under 3-2-1 "Log in". The standard password for users is **7353**.
Service	Access level for service technicians. You have to enter a password under 3-2-1 Log in.
Factory	Access level for the manufacturer only.

8.1.4 Displaying and changing parameters

The parameter numbers contain the navigation path, which helps you find a particular parameter quickly and easily. The first digit of the parameter number indicates the first menu level, which can be called up directly via the four function keys. Subsequent steps are carried out via the navigation keys.

1--Operation   2--Diagnosis   3--Settings   4--Info

Example: Parameter 3-5-10 Delta p correction:

First digit of parameter number: **3**-5-10	
3 Settings 5 Pressure 10 Delta p correction	
	Press the third function key for Settings. **3-1** appears in the top left of the screen.

Second digit of parameter number: **3-5**-10	
3 Settings **5 Pressure** 10 Delta p correction	
	Change the display **3-1** on the screen (top left) to **3-5** by pressing the navigation keys.
	To confirm the selection, press OK. **3-5** appears in the top left of the screen.

Third digit of parameter number: **3-5-10**	
3 Settings **5 Pressure** **10 Delta p correction**	
	Change the display **3-5-1** on the screen (top left) to **3-5-10** by pressing the navigation keys.
	To confirm the selection, press OK. **3-5-10** appears in the top left of the screen.

8.2 Manual operation of the pumps

By pressing the Quick access key "**Operation**", information like system pressure and pump load can be retrieved. Also, the pump operating mode like **Automatic**, **Manual** and **Disabled** can be alternated / selected. Subsequent steps are carried out by using the navigation keys.

Example: Parameter 1-2-1 (Pumps) Operation mode:

First digit of parameter number: **1**-2-1	
1 Operation 2 Pumps 1 Operation mode	
	Press the first function key for Operation. **1-1** appears in the top left of the screen.

Second digit of parameter number: **1-2**-1	
1 Operation **2 Pumps** 1 Operation mode	
	Change the display **1-1** on the screen (top left) to **1-2** by pressing the navigation keys.
	To confirm the selection, press OK. **1-2** appears in the top left of the screen.

Third digit of parameter number: **1-2-1**	
1 Operation **2 Pumps** **1 Operation mode**	
	To confirm the selection, press OK. **1-2-1** appears in the top left of the screen.
	Select the **pump number** by pressing the navigation keys.
	To confirm the selection, press OK.
	Select the operation mode **manual (on (10 s))**.
	To confirm the selection, press OK.

The selected pump will run for a period of 10 seconds and stops. The pump operation mode is changed to **Disabled (off)** This is to avoid that the pump runs unprotected.

8.2.1 Putting the pump into automatic operation again

The pump has to be put in operation again by selecting the **Automatic mode**.

OK	Stay in the selected parameter **1-2-1 Operation mode** and press OK.
▲	Select the **pump number** again by pressing the navigation keys.
OK	To confirm the selection, press OK.
▼	Select the operation mode **Automatic**.
OK	To confirm the selection, press OK.

8.3 Retrieve and reset a fault

Information about faults can be retrieved by pressing the 'diagnosis' hot key

Example: Parameter 2-1-1 Current messages

⚙	Press the diagnosis key. **2-1 General** appears in the display.
OK	Press the OK key. 2-1-1 Current messages appears in the display.
OK	Press the OK key again. The list with the current faults or the message 'no faults' appears in the display.

When there is a fault that has a circle with a dot in it, the fault is still active

◉	No Water

When there is a fault that has an open circle, the fault is not active, but has not been acknowledged yet.

○	No Water

When there is a fault that has a circle with a dot in it and a check mark following the fault message, the fault is still active and the fault has been acknowledged as well. When the fault is remedied now, it will be reset immediately.
Example: Parameter 2-1-2 History

⚙	Press the diagnosis key. **2-1 General** appears in the display.
OK	Press the OK key. The display then shows 2-1-1 Current messages; 2-1-2 History.
▼	You can select History by pressing the navigation key.
OK	Press the OK key. The list of faults from the past appears.
▼	You can select the fault by pressing the navigation key.
OK	Press the OK key. The below listed information becomes visible.

The following information about the fault is known:
• Date and time of occurrence of the fault
• Date and time of acknowledgement of the fault
• Date and time of remedy of the fault

9   Hydro-Unit configuration

9.1   Hydro-Unit MC

☞ **ATTENTION**
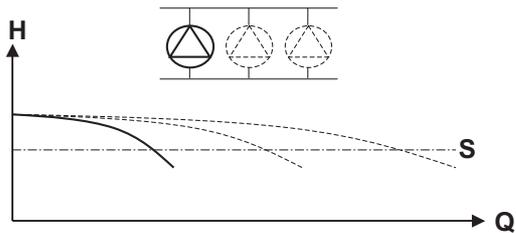

Figure 3: 1 pump operation
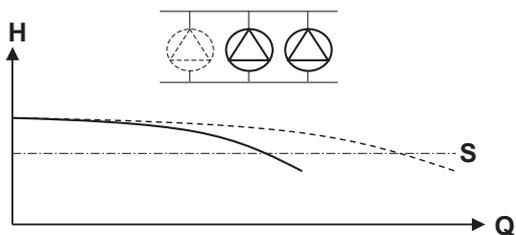

Figure 4: 2 pump operation
 Figure 5: 3 pump operation

When as a result of an increasing water volume the pressure drops below the pressure set point, a pump will be switched on. When the required system pressure has been reached, the pumps are switched off one at a time. The minimum run time related switch-off delay is optimized constantly, which results in a considerable energy saving.

Table 16: Specific parameter settings MC

		Float/level control 1 s

9.3   Hydro-Unit MCJ

☞ **ATTENTION**
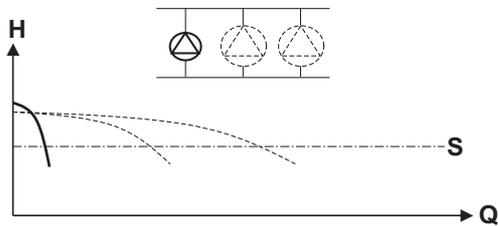

Figure 9: 1 jockey pump operation
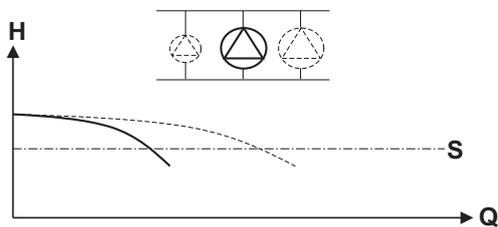

Figure 10: 1 main pump operation
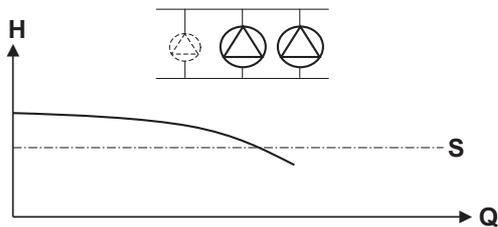

Figure 11: 2 main pumps operation

The Hydro-Unit MCJ is fitted with a jockey pump, especially suited for installations with strongly fluctuating water consumption. The jockey pump is a smaller pump with less capacity but the same pressure as the main pumps of the installation. The jockey pump will be started first. If the water consumption is larger than the capacity of the jockey pump, one or more main pumps will be switched on, whereas the jockey pump is switched off. If the capacity of the main pumps is not sufficient, in case of a large water consumption, the jockey pump will also be switched on. A Hydro-Unit can also be fitted with 2 jockey pumps which are each other's backups.

Table 18: Specific parameter settings MCJ

Parameter		Value
3-3-1	Number of pumps	1 2 3 4 5 6
3-3-2	Inlet	Switch Pressure Level / valve ON-OFF Level / valve prop.

3-6-8	Run-dry delay	Default 30 s
		Float/level control 1 s

9.4   Hydro-Unit MCF

![ATTENTION hand pointing icon] **ATTENTION**
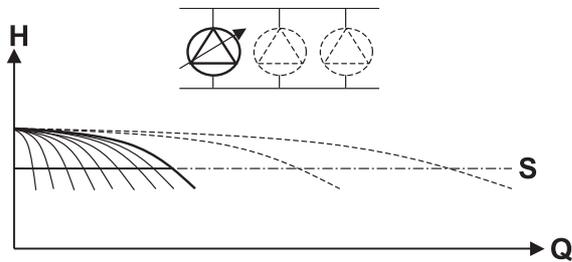

Figure 12: 1 pump operation, 1 pump variable
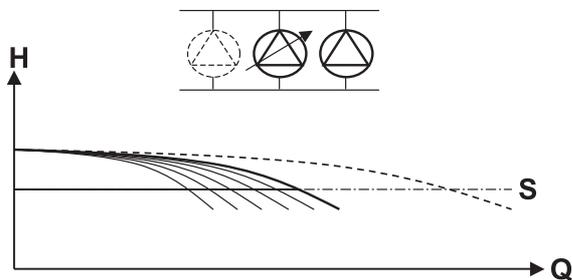

Figure 13: 2 pump operation, 1 pump variable
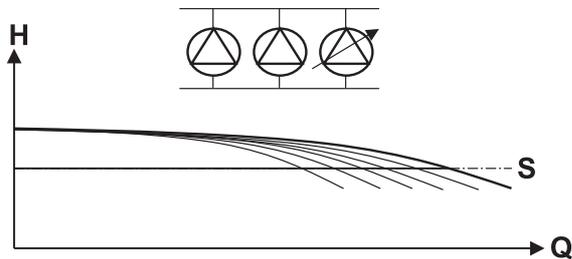

Figure 14: 3 pump operation, 1 pump variable

The Hydro-Unit MCF is equipped with one variable frequency drive. If the Hydro-Unit is rotation-controlled, the required system pressure is sensed by a pressure sensor on the outlet side of the installation. An integrated adjustable PID-controller in the software of the Megacontrol ensures that the system pressure remains constant by successively switching on or off one or more (whether or not) rotation-controlled pumps with delay. A pump is only switched on when 100 % or respectively 0 % of the speed has been reached.

Table 19: Specific parameter settings MCF

Parameter		Value
3-3-1	Number of pumps	1 2 3 4 5 6
3-3-2	Inlet	Switch Pressure Level / valve ON-OFF Level / valve prop.
3-3-3	Discharge	VFD change-over

9.6 Hydro-Unit DP-Var

☞ **ATTENTION**
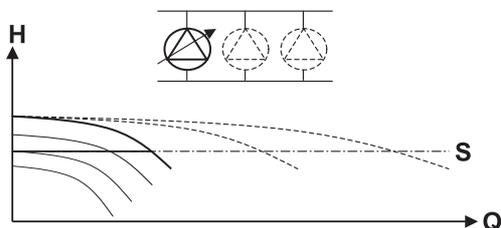

Figure 18: 1 pump operation, 1 pump variable
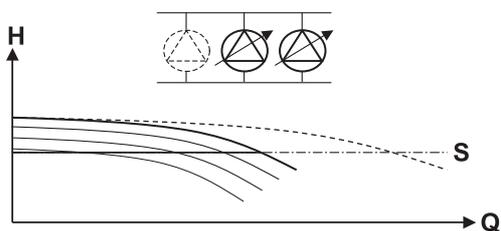

Figure 19: 2 pump operation, 2 pump variable
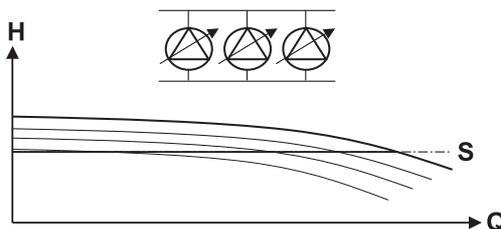

Figure 20: 3 pump operation, 3 pump variable

The Hydro-Unit Megacontrol is equipped with multiple variable frequency drives. If the Hydro-Unit is rotation-controlled, the required system pressure is sensed by a pressure sensor on the outlet side of the installation. An integrated adjustable PID-controller in the software of the Megacontrol ensures that the system pressure remains constant by successively switching on or off one or more (whether or not) rotation-controlled pumps with delay. A pump is only switched on when 100 % or respectively 0 % of the speed has been reached.

Table 21: Specific parameter settings Megacontrol

Parameter		Value
3-1-1-3-1	Pressure	kPa
3-3-1	Number of pumps	1 2 3 4 5 6
3-3-2	Inlet	Switch
3-3-3	Discharge	VFD fixed all
3-4-2-1	Sensor press. 4 mA	See pressure transmitter
3-4-2-2	Sensor press. 20 mA	See pressure transmitter
3-4-2-3	Pumps ON sensor fail	1
3-4-3-1	Communication	PumpDrive 2
3-4-3-2	Proportional const.	3
3-4-3-3	Integral time.	0.9
3-4-3-4	Differential time.	0
3-4-3-5-1	No flow bandwidth 0-1000 kPa	6
	0-2500 kPa	16
3-4-3-5-2	No flow time	16
3-4-3-5-3	No flow step	3
3-4-3-5-4	No flow max. power	100
3-4-3-9	VFD Ramp-Up	Depends on motor size
3-4-3-10	VFD Ramp-Down	Depends on motor size
3-4-3-11	VFD min. frequency	30 Hz
3-4-3-12	VFD max. frequency	50/60 Hz
3-4-3-13	P nominal of VFD	Motor power W
3-4-3-14	U nominal of VFD	400 V
3-4-3-15	F nominal of VFD	50/60 Hz
3-4-3-16	I nominal of VFD	Imax motor (by correct F and U) / Imax VFD

-	3-5-10	Delta p

Delta p -

$$y = \frac{\Delta p}{(1-n)} \; x + SP - \frac{\Delta p}{(1-n)}$$

SP =   Set point

y =   New set point

Δp =   Delta p (always positive)

n =   Total number of pumps of the installation

x =   Number of pumps switched on

9.8.4 Special input/output

Table 31: Special input/output

Input		
External off (27-29 NC)[1] [2]	The unit can be switched off through an external contact.	3-8-1-13 ON/OFF
Fire Alarm (28-29 NC)[3] [2]	All pumps can be switched on through an external contact.	3-8-1-14 ON/OFF
Function TH.FAIL. P1[2]		3-8-1-4 ON/OFF
Function TH.FAIL. P2[2]		3-8-1-5 ON/OFF
Function TH.FAIL. P3[2]		3-8-1-6 ON/OFF
Function TH.FAIL. P4[2]		3-8-1-7 ON/OFF
Function TH.FAIL. P5[2]		3-8-1-8 ON/OFF
Function TH.FAIL. P6[2]		3-8-1-9 ON/OFF
Input1 (connection WSD1 6-7)[4]	Only active when WSD parameter 3-3-4 is on 1 (off) or on 8 (temp).	See parameter 3-8-1-1 for extra functions if this input isn't used for the WSD function
Input2 (connection WSD2 8-9)	Only active when WSD parameter 3-3-4 is not on 3, 4, 6 or 7.	See parameter 3-8-1-2 for extra functions if this input isn't used for the WSD function
Input3 (connection WSD3 10-11)[3]	Only active when WSD parameter 3-3-4 is not on 4 or 7.	See parameter 3-8-1-3 for extra functions if this input isn't used for the WSD function

1. the entire control keeps functioning, but the pumps will be switched off.
2. This hardware function can be disabled. Default is enabled
3. Fire alarm has higher priority over all other alarms and will turn the pump ON.
4. This is a pulse contact

9.8.4.1 Definable I/O Par. 3-8

9.8.4.1.1 Definable inputs Par. 3-8-1

Inputs Par. 3-8-1-1/2/3 digital input on the WSD 1 to 3 hardware connections are only available when no function is chosen in par. 3-3-4 WSD

Function None:
No function is chosen the normal WSD 1 to 3 function is active see par. 3-3-4 WSD

Function Check run:
Extra parameter needed
Par. 3-7-3 Check run mode (Digital Input)
With this configuration, switching the digital input (WSD 1 to 3) will activate a check run for the pumps.

Function Alternate set point:
Extra parameter needed
Par. 3-5-9 Adapt. Set point (value of the set point)
With this configuration, switching the digital input (WSD 1 to 3) will activate an alternative set point.

Function Leakage:
With this configuration, switching the digital input (WSD 1 to 3) will create an urgent or non-urgent alarm for an external leakage alarm. A special relay is needed for leakage detection.

Function Remote Acknowledge:
With this configuration of the digital input (WSD 1 to 3) you can reset an alarm on the Megacontrol (only when the problem is solved).

Function By-pass valve:
With this function of the selected digital input (WSD 1 to 3) you can detect a signal of, for instance, a flow switch; based on this signal a by-pass valve may be opened. see also par. 3-14.

Function External power operation:
Extra parameter needed
Par. 3-4-2-5 Max power external operation
(100 %, 200 % etc.)
With this configuration of the digital input (WSD 1 to 3) you can reduce the number of pumps that can run, for instance in generator mode.

Input Par. 3-8-1-4
Function TH. FAIL P1
With this function you can activate or deactivate the digital input for thermal failure of pump 1
Deactivation of this input is only recommended in combination with the use of a VFD per pump.
If this function is activated you must connect a thermal failure signal of pump 1 or make a wire bridge between the com of the digital inputs and TH.FAIL P1 input.

Input Par. 3-8-1-5
Function TH. FAIL P2
With this function you can activate or deactivate the digital input for thermal failure of pump 2
Deactivation of this input is only recommended in combination with the use of a VFD per pump.
If this function is activated you must connect a thermal failure signal of pump 2 or make a wire bridge between the com of the digital inputs and TH.FAIL P2 input.

Input Par. 3-8-1-6
Function TH. FAIL P3
With this function you can activate or deactivate the digital input for thermal failure of pump 3
Deactivation of this input is only recommended in combination with the use of a VFD per pump.
If this function is activated you must connect a thermal failure signal of pump 3 or make a wire bridge between the com of the digital inputs and TH.FAIL P3 input.

Input Par. 3-8-1-7
Function TH. FAIL P4
With this function you can activate or deactivate the digital input for thermal failure of pump 4
Deactivation of this input is only recommended in combination with the use of a VFD per pump.
If this function is activated you must connect a thermal failure signal of pump 4 or make a wire bridge between the com of the digital inputs and TH.FAIL P4 input.

Input Par. 3-8-1-8
Function TH. FAIL P5
With this function you can activate or deactivate the digital input for thermal failure of pump 5
Deactivation of this input is only recommended in combination with the use of a VFD per pump.
If this function is activated you must connect a thermal failure signal of pump 5 or make a wire bridge between the com of the digital inputs and TH.FAIL P5 input.

Input Par. 3-8-1-9
Function TH. FAIL P6
With this function you can activate or deactivate the digital input for thermal failure of pump 6
Deactivation of this input is only recommended in combination with the use of a VFD per pump.
If this function is activated you must connect a thermal failure signal of pump 6 or make a wire bridge between the com of the digital inputs and TH.FAIL P6 input.

Input Par. 3-8-1-10

Function RDP
With this function you can activate or deactivate the digital input for run-dry protection via a digital contact e.g. Floater switch.
Deactivation of this input is only recommended in combination with the use of another protection device like a pressure transmitter on the suction side.If this function is activated you must connect a run-dry protection contact or make a wire bridge between the com of the digital inputs and the RDP input.

Input Par. 3-8-1-11
Function TFR
With this function you can activate or deactivate the digital input for the thermal failure of the VFD in the configuration VFD changeover.
If this function is activated you must connect a thermal failure signal from the VFD or make a wire bridge between the com of the digital inputs and the TFR input.

Input Par. 3-8-1-12
Function TVA
With this function you can activate or deactivate the digital input for the thermal failure of the supply valve in the configuration Level valve on/off.
If this function is activated you must connect a thermal failure signal of the supply valve or make a wire bridge between the com of the digital inputs and the TVA input.

Input Par. 3-8-1-13
Function Off
With this function you can activate or deactivate the digital input for the external off function.
If this function is activated you must connect an external signal off or make a wire bridge between the com of the digital inputs and the OFF input.

Input Par. 3-8-1-14
Function Fire
With this function you can activate or deactivate the digital input for the external fire function.
If this function is activated you must connect an external signal for fire alarm or make a wire bridge between the com of the digital inputs and the FIRE input.

9.8.4.1.2 Definable outputs Par. 3-8-2
Table 32: Special outputs

Parameter	Output		See param. for the function
3-8-2-1	Output1	P4	3-8-2-1
3-8-2-2	Output2	P5	3-8-2-2
3-8-2-3	Output3	P6	3-8-2-3
3-8-2-4	Output4	FR4	3-8-2-4
3-8-2-5	Output5	FR5	3-8-2-5
3-8-2-6	Output6	FR6	3-8-2-6

ATTENTION
Special outputs only available with the 6 pumps Megacontrol. They are only available if the connection is not occupied by a pump.

Output Par. 3-8-2-1/2/3/4/5/6 These digital outputs of pump 4/5/6 are only available when no pump function is selected to its output.

Function None:
No function is chosen the normal pump function is active (see parameter 3-3-1 number of pumps)

Function Treshold relay 1:
The function threshold relay is only available when in parameter 3-3-2 Inlet the function valve on/off or prop. is chosen.
Only after choosing the function "threshold relay", the following parameters will be visible
Par. 3-4-1-4-8-1 Treshold 1 on
Par. 3-4-1-4-8-2 Treshold 1 off
With this configuration of the selected digital output (P4/P6 and FR4/FR6) you have an extra contact for control or signalling.

Function Treshold relay 2:
The function threshold relay is only available when in parameter 3-3-2 Inlet the function valve on/off or prop. is chosen.
Only after choosing the function "threshold relay", the following parameters will be visible
Par. 3-4-1-4-8-3 Treshold 2 on
Par. 3-4-1-4-8-4 Treshold 2 off
With this configuration of the selected digital output (P4/P6 and FR4/FR6) you have an extra contact for control or signalling.

Function Input valve:
With this function the selected digital output (P4/P6 and FR4/FR6) follows the digital output of the valve on/off (digital output VA).

Function By-pass valve:

With this function the selected digital output (P4/P6 and FR4/FR6) can switch a valve see also par. 3-14

Function RDP alarm O/P:
With this function the selected digital output (P4/P6 and FR4/FR6) gives an alarm when the run-dry protection is activated, this is only applicable for run-dry contacts by float-switch or suction pressure transmitter.
See also par. 3-3-2 Inlet (switch or pressure).

Function Low water level:
With this function the selected digital output (P4/P6 and FR4/FR6) gives an alarm when the run-dry protection is activated, this only applicable for run-dry contact level transmitter.
See also par. 3-3-2 Inlet (valve on/off/ valve prop.).

Output Par. 3-8-2-7 Operation/Fail Relay
The function of the digital outputs are only available with par. 3-4-3-1 Communication PumpDrive 2.

Function: On/Off
Digital output of J602 P1/P2/P3 and J104 P4/P5/P6 are used for an external VFD running signal.
Digital output of J601 P1/P2/P3 and J103 P4/P5/P6 are used for an external VFD failure signal. (See figure 37 Megacontrol Lay-out 1-3 (1-6) pumps)

Output Par. 3-8-2-8 Conf. FR AO
If this output isn't used for par. 3-3-3 Discharge VFD changeover you can connect an analogue input to this analogue output or the system load to this output.

Function: System pressure:
The signal 4-20 mA of the discharge pressure transmitter is available to the output and can be used, for instance in a BMS, to indicate the discharge pressure (4-20 mA) at a distance.

Function: Inlet pressure:
The signal 4-20 mA of the suction pressure transmitter is available to the output and can be used, for instance in a BMS, to indicate the inlet pressure (4-20 mA) at a distance.

Function system load:
The system load is as 4-20 mA available, for instance in a BMS, for an indication of the pumps that are running.

Function level height:
The signal 4-20 mA of the level transmitter is available to the output and can be used, for instance in a BMS, to indicate the level pressure (4-20 mA) at a distance.

Output Par. 3-8-2-10 Conf. Valve AO
If this output isn't used for par. 3-3-2 Level on/off or Level prop. you can connect an analogue input to this analogue output or the system load to this output.

Function: System pressure:
The signal 4-20 mA of the discharge pressure transmitter is available to the output and can be used, for instance in a BMS, to indicate the discharge pressure (4-20 mA) at a distance.

Function: Inlet pressure:
The signal 4-20 mA of the suction pressure transmitter is available to the output and can be used, for instance in a BMS, to indicate the inlet pressure (4-20 mA) at a distance.

Function system load:
The system load is as 4-20 mA available, for instance in a BMS, for an indication of the pumps that are running.

Function level height:
The signal 4-20 mA of the level transmitter is available to the output and can be used, for instance in a BMS, to indicate the level pressure (4-20 mA) at a distance.

Pump changeover par. 3-13:
The function pump changeover is only applicable if par. 3-3-3 Discharge Fixed speed is selected.
When a pump is running continuously for instance circulation systems) the pump will switch over after a certain time (see par. 3-6-4 max run time) You can choose how the running pump must switch off.

Par. 3-13-1
Function underpressure:
Running pump must switch off before the 2e pump switch on (pressure drop is possible) delay time via Par. 3-13-2 Change over delay

Function overpressure:
Running pump must switch off after the 2e pump has switched on (pressure overshoot) delay time via Par. 3-13-2 Change over delay

Peak load pump par. 3-6-15:
In system whit a big difference in the flow/capacity of the pumps you can delay the switch on and switch off of the following pump(s)

Par. 3-6-15-1
Function Switch on delay

If a time is set in this parameter there is an delay to switch on the next pump after the discharge pressure has dropped beneath the set point.

Par. 3-6-15-2
Function Switch off delay
If a time is set in this parameter there is an delay to switch off the a pump after the discharge pressure is above the set point.

9.8.5   By Pass Valve par. 3-14

Par. 3-14-1

Function off:
No function is selected

Function Check run:
Extra parameters needed
Par. 3-14-2 Open delay
Par. 3-14-3 Close delay
Par. 3-8-2-1 / 3-8-2-6 Selection of the digital output witch can switch the by-pass valve.
With this function during the check run of the pump(s) a bypass valve is opened to avoid that the pump(s) are running hot.
With open delay you can determine when the bypass valve opens after the pump has started.
With close delay you can determine when the bypass valve must close before the pump must stop.

Function PT 1000:
Extra parameters needed
Par. 3-14-4 Temperature in Celsius
Par. 3-14-5 Flush time in seconds
Par.3-14-6 Attempts in 24 h
Par. 3-8-2-1 / 3-8-2-6 Selection of the digital output witch can switch the by-pass valve (flush valve)
With this function you can flush, for instance, a water tank when the medium temperature over a certain period is too high.
You can set the amount of attempts in 24 h when the temperature stays too high within this 24 h an urgent alarm will be raised.

Function Digital input:
Extra parameters needed
Par. 3-14-7 Minimum open time > in seconds
Par. 3-8-2-1 / 3-8-2-6 Selection of the digital output witch can switch the by-pass valve
With this configuration of the digital input you can switch an external bypass valve to create a minimal flow for the pump. Also is needed a contact from an external, for instance, flow switch.

When the pump is started also the by-pass valve is opened when the flow is sufficient the contact of the flow indicator switches off and the by-pass valve closes.
When the flow is reduced below a minimum the bypass valve opens again. If the pressure is above set point first the bypass valve will close and then the pump will stop.

Par. 3-4-1-4-10-6 Open band for a proportional valve Function Level see par. 3-3-2 Inlet Level prop.
Par. 3-4-1-4-10-6 Open band in %
Par. 3-4-1-4-10-3 Hysteresis
Par. 3-4-1-4-10-1 Level set point 1
With this parameter you can give the proportional valve a minimum open signal
When the level in a tank is descending the proportional valve will start opening with this minimum band.
When the level is descending further the proportional valve will follow this signal to the value set in par. 3-4-1-4-10-3
When the level is raising the proportional valve will close till the value of the open band is reached.
Then proportional valve will be stopped (it remains open with the set value in par. 3-4-1-4-10-6)
When the level in the tank reaches the value of par. 3-4-1-4-10-1 the proportional valve will close immediately.

Par 3-4-3-28 Torque characteristics
Only applicable for the Danfoss VLT 2800

9.9 Break-Unit Megacontrol (Rainwater recovery)

It is possible to run three booster pumps and two rainwater pumps (only one running at the time) with the Control unit. Standard will be one or two booster pumps (only one running at the time) and one rainwater pump. The rainwater recovery unit is a separate variant of the 3-3-2 parameter.

☞ **ATTENTION**
See factory settings 3-2-2-1
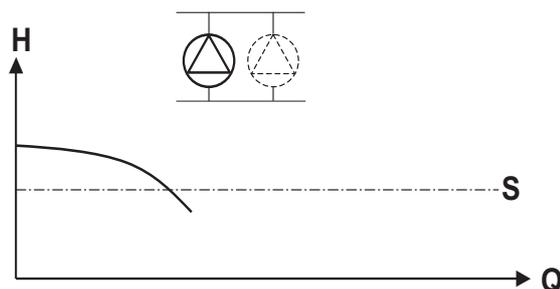

Figure 30: 1 pump operation

When as a result of an increasing water volume the pressure drops below the pressure set point, one pump will be switched on. When the required system pressure has been reached, the pump is switched off. The minimum run time related switch-off delay is optimized constantly, which results in a considerable energy saving.

Table 33: Specific parameter settings Megacontrol

Parameter		Value
3-3-1	Number of pumps	1 2
3-3-2	Inlet	Rainwater
3-3-3	Discharge	Fixed Speed
3-4-1-4-11	Water supply control	
3-4-1-4-11-1	Level RW-pump Off	90 % (B)[1]
3-4-1-4-11-2	Level RW-pump On	70 % (C)[1]
3-4-1-4-11-3	Level DW-valve open	40 % (X)[1]
3-4-1-4-11-4	Overflow protection	On
3-4-1-6	Potable water inlet	
3-4-1-6-1	Refresh intervall	336 h
3-4-1-6-2	Force refresh	Off
3-4-1-6-3	Refresh duration	10 s
3-4-1-7	Rainwater inlet	
3-4-1-7-1	Number of pumps	1
3-4-1-7-2	Max. Pumpstarts	30
3-4-1-7-3	Max. run time	1800 s
3-4-1-7-4	Check run interval	172800
3-4-1-7-5	Check run duration	2
3-5-1	Set point	400 kPa
3-5-3	Bandwidth	30
3-6-2	Min. run time	Default 180 s
		DOL ≤ 2.2 kW 90 s
3-6-3	Min. run time corr.	10 s
3-6-8	Run-dry delay	Float/level control 1

1.   See Figure 31

20130231-C

9.9.1 Explanation of parameters

9.9.1.1 Pressure settings set points
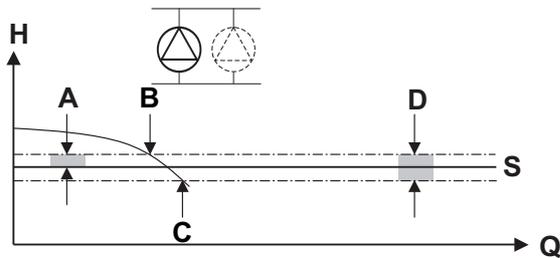

Figure 32: Pressure settings set points fixed speed

Table 34: Pressure settings set points fixed speed

ID	Parameter	
S	3-5-1	Set point
A	3-5-3	Bandwidth
B		Switch-off pressure
C		Switch-on pressure
D		2 x bandwidth

9.9.1.2 Delta p + correction
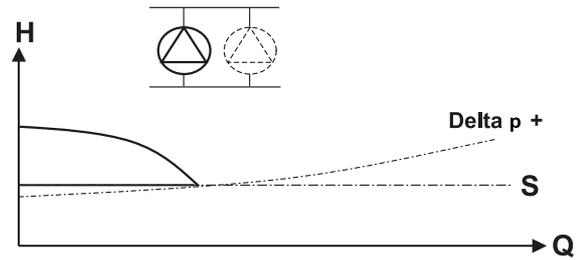

Figure 33: 1-pump on 1 pump stand-by

Table 35: Parameters set points

ID	Parameter	
S	3-5-1	Set point
+	3-5-10	Delta p

Delta p +

$$y = \frac{\Delta p}{(n^2-1)} \, x^2 + SP - \frac{\Delta p}{(n^2-1)}$$

SP = Set point

y = New set point

Δp = Delta p (always positive)

n = Total number of pumps of the installation

x = Number of pumps switched on

9.9.1.3 Delta p - correction
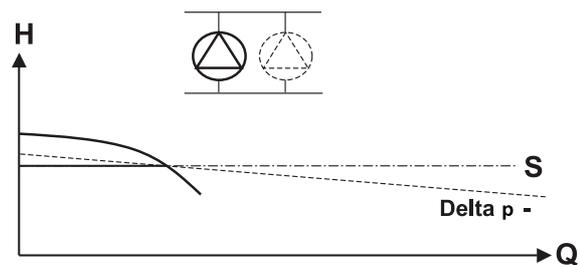

Figure 34: 1-pump on 1 pump stand-by

Table 36: Parameters set points

ID	Parameter	
S	3-5-1	Set point
-	3-5-10	Delta p

Delta p -

$$y = \frac{\Delta p}{(1-n)} \, x + SP - \frac{\Delta p}{(1-n)}$$

33

SP =   Set point

y =   New set point

Δp =   Delta p (always positive)

n =   Total number of pumps of the installation

x =   Number of pumps switched on

9.9.2   Special input/output

Table 37: Special input/output

Input		
External from (27-29 NC)[1]	The unit can be switched off through an external contact.	
Fire Alarm (28-29 NC)[2]	All pumps can be switched on through an external contact.	
Input1 (connection WSD1 6-7)[3]	Only active when WSD parameter 3-3-4 is on 1 (off) or on 8 (temp).	See parameter 3-8-1-1 for extra functions if this input isn't used for the WSD function
Input2 (connection WSD2 8-9)[3]	Only active when WSD parameter 3-3-4 is not on 3, 4, 6 or 7.	See parameter 3-8-1-2 for extra functions if this input isn't used for the WSD function
Input3 (connection WSD3 10-11)[3]	Only active when WSD parameter 3-3-4 is not on 4 or 7.	See parameter 3-8-1-3 for extra functions if this input isn't used for the WSD function

1.   the entire control keeps functioning, but the pumps will be switched off.
2.   Fire alarm has higher priority over external contact 'off'.
3.   This is a pulse contact for WSD functions, for other applications, it can be used as NC contact.

10   Parameters

10.1   Parameter list

The parameters of the main menu are related to the standard (default) settings of the installation. The standard (default) settings can be adjusted where necessary and may also be reset whenever required. On the basis of the standard set parameters, an installation will operate as it should. Additional, extra parameters may be used, e.g. those under 'advanced', 'pressure', 'delays' and 'clock'. In order to use these additional parameters, you should activate the corresponding sub menus.

☞ **ATTENTION**
For unit-specific values see: 'Factory settings'.

☞ **ATTENTION**
Certain parameters are not visible, depending on the configuration.

3-4-1-4-6	Critical water level	0 **30** 99.9	e	s	Critical level at which the tank threatens to become empty. (back-up storage left)
3-4-1-4-7	High water level	0 **105** 199.9	e	s	High water level at which the tank threatens to become over-full
3-4-1-4-8	Threshold		e	s	Menu for having one or two extra contacts switched at a level set as required
3-4-1-4-8-1	Threshold 1 ON	0 **50** 199.9	e	s	Water level at which the relays output becomes ""high""
3-4-1-4-8-2	Threshold 1 OFF	0 **50** 199.9	e	s	Water level at which the relays output becomes ""low""
3-4-1-4-8-3	Threshold 2 ON	0 **40** 199.9	e	s	Water level at which the relays output becomes ""high""
3-4-1-4-8-4	Threshold 2 OFF	0 **40** 199.9	e	s	Water level at which the relays output becomes ""low""
3-4-1-4-9	Supply valve ON/OFF		e	s	The supply valve open/closed with which the receiver tank is filled
3-4-1-4-9-1	Level 1 open	0 **70** 99.9	e	s	Level in the receiver tank at which the supply valve is opened
3-4-1-4-9-2	Level 1 closed	0 **90** 99.9	e	s	Level in the receiver tank at which the supply valve is closed
3-4-1-4-9-3	Level 1A open	0 **40** 99.9	e	s	Alternative level (Clock alternated) in the receiver tank at which the supply valve is opened
3-4-1-4-9-4	Level 1A closed	0 **60** 99.9	e	s	Alternative level (Clock alternated) in the receiver tank at which the supply valve is closed
3-4-1-4-10	Supply valve prop.		e	s	The supply valve proportional opened with which the receiver tank is filled

Parameter	Display text	Value description[1] Min/Max	Read	Write	Help text
3-4-1-4-10-1	Level setpoint 1	0 **80** 99.9	e	s	Maximum level in the receiver tank at which the proportional valve is fully closed
3-4-1-4-10-2	Level setpoint 1A	0 **40** 99.9	e	s	Alternative level (Clock alternated) in the receiver tank at which the proportional valve is fully closed
3-4-1-4-10-3	Hysteresis	0 **15** 99.9	e	s	Differential level in the receiver tank at which the proportional valve is fully opened
3-4-1-4-10-4	Sample time	0 **10** 99	e	s	Time between the level measurements controlling the proportional valve position
3-4-1-4-10-5	Analog output		e	s	Analog output configuration, 4-20mA / 0-20mA
3-4-1-4-10-5		**0-20mA**	e	s	
3-4-1-4-10-5		4-20mA	e	s	
3-4-1-4-10-6	Open band	0 **2** 15	e	s	Band below the setpoints 1 and 1A, at which the prop. control of the valve is suppressed.
3-4-1-4-11	Water supply control		e	s	
3-4-1-4-11-1	Level RW-pump Off	70 **90** 99.9	e	s	Level in the tank at which the rainwater pump is switched off.
3-4-1-4-11-2	Level RW-Pumpe On	40 **70** 90	e	s	Level in the tank at which the rainwater pump is switched on and the potable water inlet valve is closed.
3-4-1-4-11-3	Level DW-valve open	0 **40** 70	e	s	Level in the tank at which the potable water inlet valve is opened.
3-4-1-4-11-4	Overflow protection		e	s	Overflow protection to stop any water inlet if digital input "Leakage" is activated.
3-4-1-4-11-4		**OFF**	e	s	
3-4-1-4-11-4		ON	e	s	
3-4-1-5	Auto. Setpoint Redu.		e	n	Automatic setpoint reduction by low inlet pressure
3-4-1-5-1	ASR function		e	s	Automatic setpoint reduction function
3-4-1-5-1		**OFF**	e	s	
3-4-1-5-1		ON	e	s	
3-4-1-5-2	Switch on point	100 **200** 400	e	s	The pumps are switched On, if inlet pressure is above switch-On point for more then Switch-On time
3-4-1-5-3	Inlet Set point	**100** 400	e	s	Inlet setpoint used for automatic reduction by low inlet pressure
3-4-1-5-4	Switch off point	0 **90** 100	e	s	The pumps are switched off, if inlet pressure is below switch-off point for more then switch-off time
3-4-1-5-5	Proportional const.	0 **3** 10	e	s	Proportional amplification factor the system pressure is controlled with
3-4-1-5-6	Integral time	0 **0.9** 60	e	s	Speed with which the deviation of the required system pressure is adjusted

Parameter	Display text	Value description[1] Min/Max	Read	Write	Help text
3-4-1-5-7	Differential time	**0** 99.99	e	s	The level of damping with which the deviation of the required system pressure is controlled
3-4-1-5-8	ARW delay factor	5 **50** 100	d	d	Setting for ARW control, sampletime factor tarw >= 5 * ts
3-4-1-5-9	Switch On time	0 **5** 60	s	s	Switching on time after Automatic setpoint reduction shutdown alarm
3-4-1-5-10	Switch Off time	0 **5** 60	s	s	Shutdown is not actived if the inlet pressure is not less then set value for switch-off time
3-4-1-6	Potable water inlet		e	s	
3-4-1-6-1	Refresh intervall	0 **336** 999	e	s	Time duration between two potable water refreshment sequences of the inlet
3-4-1-6-2	Force refresh		e	s	Forced potable water refrehment of the inlet also if water level in tank is higher than level B.
3-4-1-6-2		**OFF**	e	s	
3-4-1-6-2		ON	e	s	
3-4-1-6-3	Refresh duration	0 **10** 300	e	s	Time duration for potable water refreshment of the inlet
3-4-1-7	Rainwater inlet		e	s	
3-4-1-7-1	Number of pumps	1 **2**	e	s	Number of rainwater pumps
3-4-1-7-2	Max. pumpstarts	1 **30** 60	e	s	Maximum allowed starts per hour of rainwater pump
3-4-1-7-3	Max. run time	0 **1800** 3600	e	s	Maximum continuous run time of the rainwater pump. After this time the rainwater pump will be forced to change over.
3-4-1-7-4	Check run interval	0 **172800** 2592000	e	s	The interval time between the check runs applicable for rain water pumps not operating.
3-4-1-7-5	Check run duration	0 **2** 60	e	s	The check-run time per pump.
3-4-1-8	average pressure	0 **10** 400	e	c	
3-4-2	Discharge		e	s	Discharge pressure settings
3-4-2-1	Sensor press. 4 mA	-100 **0** 1000	e	s	Measured value at 4mA
3-4-2-2	Sensor press. 20 mA	0 **1000** 9999	e	s	Measured value at 20mA
3-4-2-3	Pumps ON sensor fail	**0** 3	e	s	Number of pumps that is started in case of a failure of the pressure sensor on the discharge side.
3-4-2-4	Max power	0 **600**	n	s	dummy to map slection ENUM to UINT16

Parameter	Display text	Value description[1] Min/Max	Read	Write	Help text

11 Faults

11.1 Failure messages Megacontrol

Table 44: Faults list Megacontrol

Failure message:	Explanation:	Failure output:
Failure PT. Dis.	Failure Pressure Transmitter discharge side (value >20mA) replace PT and reset system	Urgent
Sys. press.to low	System pressure too long under minimum value (3-5-13)	Urgent[1]
Sys press.to high	System pressure too long above maximum value (3-5-11)	Urgent[1]
Sys. press.to low	System pressure too long under minimum value (3-5-13)	Non urgent[2]
Sys press.to high	System pressure too long above maximum value (3-5-11)	Non urgent[2]
No water	No sufficient water or -pressure available at suction side	Urgent[1]
No water	No sufficient water or -pressure available at suction side	Non urgent[2]
Maintenance req.	Maintenance is required	Non urgent
More pumps fail	More than two pumps out of order	Urgent
No refresh tank #	No water refreshm in tank # (sensed by the flow detector) check precharged air pressure	Urgent
Aver temp to high	Average room temperature to high (sensed by the temperature sensor)	Urgent
Curr temp to high	Current room temperature to high (sensed by the temperature sensor)	Non urgent
Temp.failure Pump #	Failure pump #. Solve problem and reset the system	Non urgent
Failure valve	Failure supply valve. Solve problem and reset the system	Urgent
Inlet sensor fail	Failure inlet Sensor for level or pressure. (signal out of range) replace Sensor and reset system.	Urgent
High water level	Water level in receiver tank too high	Non urgent
Crit. water level	Water level in receiver tank critical (near to empty)	Non urgent
Low water level	Water level in receiver tank too low (system shut down for run dry protection)	Urgent[1]
Low water level	Water level in receiver tank too low (system shut down for run dry protection)	Non urgent[2]
Comm. Error FC #	Communication to variable frequency drive # is broken	Non urgent
Incor. check sum F #	FC # Incorrect check sum within the protocol	Non urgent
Temp. sensor fail	Failure Room Temperature Sensor. replace R.T.S. and reset system	Non urgent
24V out of range	Failure message due to internal 24V supply out of range	Non urgent
5V out of range	failure message due to internal 5V supply out of range	Non urgent
3V out of range	Failure message due to internal 3V supply out of range	Non urgent
External off	Failure message due to an external off command	Urgent
Fire alarm	Failure message due to an external fire alarm command	Urgent
Failure VFD	Failure of the VFD drive at discharge mode VFD change-over or VFD fixed one	Urgent
Br. Wire Sens.dis	Failure Pressure Transmitter discharge side (value lower then 4mA) connect or replace Pressure Transmitter and reset system	Urgent
Br. Wire Sens.Inl	Failure inlet Sensor for level or pressure. (wire break detection) Replace Sensor and reset system.	Urgent
Fail. several FCs	Failure for more than one FC occurs	Urgent
Leakage	There is a leakage in the unit. Solve problem and reset the system	Urgent
Eeprom HW Error	The Eeprom data was not saved due to HW problem	Urgent
Manual off Pump # off		Not urgent
Manual On Pump #		Not urgent
More Pumps off		Not urgent

Failure message:	Explanation:	Failure output:
Internal Failure P#		Not urgent
Mains Failure P#		Not urgent
Over voltageP#		Not urgent
Under voltage P#		Not urgent
Overload Failure P#		Not urgent
Brake resistor P#		Not urgent
Temp. Failure P#		Not urgent
ATM Failure P#		Not urgent
Flushing		Not urgent
Valve opened oftenly		Urgent
Circuit Fail. FC#		Not urgent
Ext. Power Operation	External power supply operation	Not urgent
Setpoint Reduction	Automatic Setpoint Reduction because of inlet pressure dropdown	Not urgent
Factory Test		Not urgent
MPO Failure	Incorrect switching point configured or sensor failure	Not urgent
ASR Shutdown	Automatic Setpoint Reduction Shutdown because of inlet pressure dropdown	Urgent
BC IO not connected		
Failure RW-pump 1	Failure rainwater pump 1. Solve problem and reset the system.	Not urgent
Failure RW-pump 2	Failure rainwater pump 2. Solve problem and reset the system.	Not urgent
No rainwater	No rainwater is available.	Not urgent
Failure DW-valve	Failure of the drinking water inlet valve.	Not urgent
Starts/h RW-pump 1	Maximum starts per hour of rainwater pump 1 are exceeded.	
Starts/h RW-pump 2	Maximum starts per hour of rainwater pump 2 are exceeded.	
Use of potable water	Potable water was used.	Not urgent
Hygienic addition	The tank inlet was flushed with potable water.	Not urgent
Forced hyg. Addition	Flushing of tank inlet with potable water was forced.	Not urgent
Manual Off RW-pump 1		
Manual Off RW-pump 2		
Manual On RW-pump 1		
Manual On RW-pump 2		
Tank filling	The tank is filled due to a triggered start of the rainwater pumps.	
Hyg. add. Incomplete	Hygienic addition was incomplete, because tank was filled or failure of drinking water inlet valve.	
Occured:	Failures that have occurred recently.	
Acknowledged:	Failures that got acknowledged.	
Cleared:	Failures that got cleared	
Data:		
No failures		

1. Manual alarm reset = Urgent.
2. Automatic alarm reset = Not urgent.

11.2 Failure messages Danfoss VFD

ATTENTION
The error codes are displayed in the error log of the Megacontrol. For specific information about the error codes please consult the (technical) documentation of the VFD concerned.

1. Can not be Auto reset via par. 14-20 Reset Mode

A trip is the action when an alarm has appeared. The trip will coast the motor and can be reset by pressing the reset button or make a reset by a digital input (parameter group 5-1* (See Danfoss manual). The origin event that caused an alarm cannot damage the frequency converter or connected parts. A Trip Lock situation can only be reset by a power cycling.

Table 47: VLT Microdrive FC 51

92	Parameter value exceeds the min/max limits				X
nw run	Not While RUNning				X
Err.	A wrong password was entered				X

1. These faults may be caused by mains distortions. Installing Danfoss Line Filter may rectify this problem.

11.3 Midi Drive FC280

Table 48: Midi Drive FC280

No.	Description	Warning	Alarm	Trip lock	Cause
2	Live zero error	X[1]	X	-	The signal on terminal 53 or 54 is less than 50% of value set in parameter 6-10 Terminal 53 Low Voltage, parameter 6-20 Terminal 54 Low Voltage, and parameter 6-22 Terminal 54 Low Current.
3	No motor	X	-	-	No motor has been connected to the output of the frequency converter.
4	Mains phase loss[2]	X	X	X	Missing phase on the supply side, or the voltage imbalance is too high. Check the supply voltage.
7	DC overvoltage[2]	X	X	-	DC-link voltage exceeds limit.
8	DC undervoltage[2]	X	X	-	DC-link voltage drops below the voltage warning low limit.
9	Inverter overloaded	X	X	-	More than 100% load for too long.
10	Motor ETR overtemperature	X	X	-	Motor is too hot due to more than 100 % load for too long.

No.	Description	Warning	Alarm	Trip lock	Cause
11	Motor thermistor over-tem-perature	X	X	-	Thermistor or thermistor connection is disconnected, or the motor is too hot.
12	Torque limit	X	X	-	Torque exceeds value set in either parameter 4-16 Torque Limit Motor Mode or parameter 4-17 Torque Limit Generator Mode.
13	Overcurrent	X	X	X	Inverter peak current limit is exceeded. If this alarm occurs on power-up, check whether power cables are mistakenly connected to the motor termi-nals.
14	Ground fault	-	X	X	Discharge from output phases to ground.
16	Short circuit	-	X	X	Short circuit in motor or on motor terminals.
17	Control word timeout	X	X	-	No communication to frequency converter.
25	Brake resistor short-circuited	-	X	X	Brake resistor is short-circuited, thus the brake function is disconnected.
26	Brake overload	X	X	-	The power transmitted to the brake resistor over the last 120 s exceeds the limit. Possible corrections: Decrease brake energy via lower speed or longer ramp time.
27	Brake IGBT/brake chop-per short- circuited	-	X	X	Brake transistor is short-circuited, thus the brake function is disconnected.
28	Brake check	-	X	-	Brake resistor is not connected/working.
30	U phase loss	-	X	X	Motor phase U is missing. Check the phase.
31	V phase loss	-	X	X	Motor phase V is missing. Check the phase.
32	W phase loss	-	X	X	Motor phase W is missing. Check the phase.
34	Fieldbus fault	X	X	-	PROFIBUS communication issues have occurred.
35	Option fault	-	X	-	Fieldbus detects internal faults.
36	Mains failure	X	X	-	This warning/alarm is only active if the supply voltage to the frequency con-verter is less than the value set in parameter 14-11 Mains Fault Voltage Level, and parameter 14-10 Mains Failure is NOT set to [0] No Function.
38	Internal fault	-	X	X	Contact the local Danfoss supplier.
40	Overload T27	X	-	-	Check the load connected to terminal 27 or remove short-circuit connection.
46	Gate drive voltage fault	-	X	X	-
47	24 V supply low	X	X	X	24 V DC may be overloaded.
49	Speed limit	-	X	-	The motor speed is below the specified limit in parameter 1-87 Trip Speed Low [Hz].
50	AMA calibration failed	-	X	-	A calibration error has occurred.
51	AMA check Unom and Inom	-	X	-	Wrong setting for motor voltage and/or motor current.
52	AMA low Inom	-	X	-	Motor current is too low. Check the settings.
53	AMA big motor	-	X	-	The power size of the motor is too large for the AMA to operate.
54	AMA small motor	-	X	-	The power size of the motor is too small for the AMA to operate.
55	AMA parameter range	-	X	-	The parameter values of the motor are outside of the acceptable range. AMA does not run.
56	AMA interrupt	-	X	-	The AMA is interrupted.
57	AMA timeout	-	X	-	-
58	AMA internal	-	X	-	Contact Danfoss.
59	Current limit	X	X	-	Frequency converter overload.
60	External interlock	-	X	-	External interlock has been activated.
61	Encoder loss	X	X	-	-
63	Mechanical brake low	-	X	-	The actual motor current has not exceeded the release brake current within the start delay time window.
65	Control card temp	X	X	X	The cutout temperature of the control card has exceeded the upper limit.

No.	Description	Warning	Alarm	Trip lock	Cause
67	Option change	-	X	-	A new option is detected or a mounted option is removed.
68	Safe Torque Off2)	X	X	-	STO is activated. If STO is in manual restart mode (default), to resume normal operation, apply 24 V DC to terminals 37 and 38, and initiate a reset signal (via fieldbus, digital I/O, or [Reset]/[Off Reset] key). If STO is in automatic restart mode, applying 24 V DC to terminals 37 and 38 automatically resumes the frequency converter to normal operation.
69	Power card temp	X	X	X	The cutout temperature of the power card has exceeded the upper limit.
80	Drive initialized to default value	-	X	-	All parameter settings are initialized to default settings.
87	Auto DC braking	X	-	-	Occurs in IT mains when the frequency converter coasts, and the DC voltage is higher than 830 V for 400 V units and 425 V for 200 V units. The motor consumes energy on the DC link. This function can be enabled/disabled in parameter 0-07 Auto DC Braking.
88	Option detection	-	X	X	The option is removed successfully.
95	Broken belt	X	X	-	-
99	Locked rotor	-	X	-	Rotor is blocked.
120	Position control fault	-	X	-	-
126	Motor rotating	-	X	-	PM motor is rotating when execute AMA.
127	Back EMF too high	X	-	-	The back EMF of PM motor is too high before starting.
188	STO internal fault2)	-	X	-	24 V DC supply is connected to only 1 of the 2 STO terminals (37 and 38), or a failure in STO channels is detected. Ensure that both terminals are powered by 24 V DC supply, and that the discrepancy between the signals at the 2 terminals is less than 12 ms. If the fault still occurs, contact the local Danfoss supplier.
nw run	Not while running	-	-	-	Parameters can only be changed when the motor is stopped.
Err.	A wrong password was entered	-	-	-	Occurs when using a wrong password for changing a password-protected parameter.

1. An (X) marked indicates that the warning or alarm has occurred.
2. Mains distortions may cause these faults. Installing a Danfoss line filter may rectify this problem.

12   Annexes

12.1   Megacontrol

Table 49: Technical specifications

Item	Value
Type of control	Megacontrol
Article number Megacontrol 1-3 pumps	77870550
Article number Megacontrol 1-6 pumps	77870551
Dimensions HxWxD [mm]	306.5 x 187 x 72.5
Connecting voltage [V]	230 ± 10 %
Frequency [Hz]	50/60
Relay outputs [A]	1 max.
Analog inputs [mA]	4 - 20
Analog outputs [mA]	0/4 - 20
Safety class	IP55[1]
Display	7 lines x ....characters
Ambient temperature in control panel [°C]	50 max.
Atmospheric humidity [%]	20 - 90 (no condensation)
Fuse	250 V T315mA R508D80
Maximum altitude	1000 m above sea level

1.   When built into a IP55 control panel.
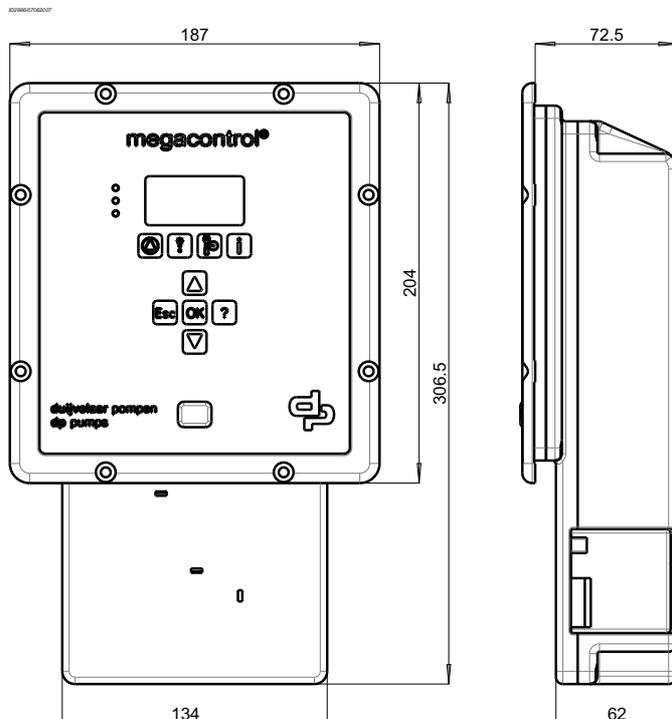

Figure 35: Megacontrol

12.2 Built-in diagram
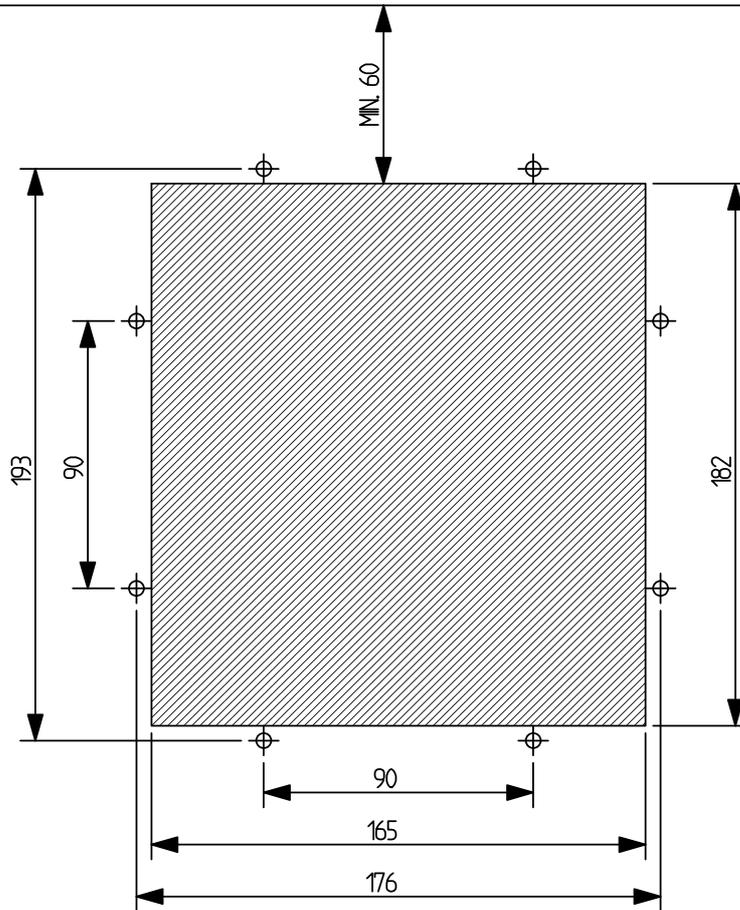

Figure 36: Built-in diagram

12.3 Electrical connections

Additional information on the RS485 bus: J302 to J301 and the use of a filter on the coil of contactors / auxiliary relays. See chapter: 7.2.3 Using contactors

☞ **ATTENTION**
Connections for bus communication (RS485 A/B) to frequency converter are moved from J302 to J301 (see drawing fig.: 37 Megacontrol Lay-out 1-3 (1-6) pumps)

☞ **ATTENTION**
Changes to the DIP switch settings of the bus termination of the frequency converter becomes only effective after switching off and then on again of the frequency converter.

1. Connections 6 to 11 can be used for definable inputs
2. Connections 58 up to 74 are only used with 4 to 6 pumps
3. Connections 61 to 74 can be used for definable outputs
4. Connections 39/40 and 42/43 are closed under normal use

12.4   EC declaration of conformity

Undersigned:

D.P. Industries B.V.
Kalkovenweg 13
2401 LJ Alphen aan den Rijn, The Netherlands
Tel: (+31)(0)-172-48 83 88

Declares as manufacturer entirely on his own responsibility, that the product(s):

Product: Control unit
Type: Megacontrol

to which this declaration refers, is in accordance with the following standards:

-    EN 61000-6-1
-    EN 61000-6-3
-    EN 61000-6-4

according to the provisions of (when applicable):

-    Low voltage directive 2014/35/EU
-    EMC directive 2014/30/EU
-    RoHS 2011/65/EU

If the control unit is used as a stand-alone product, it is subject to this declaration of conformity.

If the control unit is built in an appliance or is assembled together with other equipment in certain installations, then it should not be put into operation until a declaration has been given with respect to the appliance concerned that it complies with the directives listed above.

Alphen aan den Rijn,
2017-06-01
